

Approximate Sika Deer Gestation Table-224 days

Sika deer (*Cervus nippon*) are a unique cervid with a variety of coat colors ranging from brown to black. Lighter animals can have white spots and darker animals can have indistinct black spots but oftentimes are uniform in color. There are several subspecies of Sika and they vary in color and antler growth. Male typically weigh from 72 to 176 lbs and females weigh from 58 to 100 lbs. They breed from September to October predominantly and have a gestation length of 7 1/2 months. Their young are generally born from May to August with a peak in June. Sika tend to have single births, twins are rare.
